Printable name-review sheet — `pantheon-names-worksheet-grok.md`

How to use

- Print double-sided if you like; each block is one decision.
- Circle or check **Keep** / **Alt A–C** / **Custom**.
- Write your own theonym on the underline when none of the candidates fit.
- Optional note line: gender, collision worry, “sounds like X,” etc.

Naming convention (quick)

Semitic consonantal root → stylized vowel-fill → theonym. Not scholarly transcription; not unmodified real words. Suffixes in this file tend to be **-on**, **-iel/-el**, **-an**, or bare.

Two kinds of alternate

Kind	Label	Meaning
Same-root theonym	Alt A / B / C	New surface name; root stays
Root swap	Root alt 1 / 2 / ...	Cleaner root for the <i>current</i> domain + sample theonyms

When a domain moved but the theonym didn’t, prefer a **root alt** over a same-root rename. Pick boxes cover both.

Phonetics key

Symbol	Sound
’	Glottal stop (catch in <i>uh-oh</i>)
‘	Pharyngeal “pressed <i>a</i> ” (ayin); soft in speech, often just thickens the vowel
Ḥ / ḥ	Harsh <i>kh</i> as in German <i>Bach</i> or Scottish <i>loch</i>
Ṣ / ṣ	Emphatic <i>ts</i> (as in <i>tsar</i>), heavier than plain <i>s</i>
Ṣ̣ / ṣ̣	<i>sh</i> as in <i>ship</i>
Ṭ / ṭ	Emphatic <i>t</i> (heavier <i>t</i>)
Ṣ̣ / ṣ̣	<i>s</i> / <i>sh</i> border (here treated like <i>s</i> in <i>saraph</i>)
Stress	CAPS in approximations = primary stress

Columns

Label	Meaning
Current	Name in the locked sketches / reference right now
Domain	Portfolio label <i>as currently locked</i> (not always the old roster label)
Root	Consonantal true-name pattern <i>in use now</i>
Phonetic	How to say the root / source word
Original	Earlier theonym and/or earlier domain label, if different
Alts	Same-root theonym proposals
Root alt	Better root for this domain + sample names (where the current root stretches)
Custom	Your write-in (name and/or root)
